

BOLERO F1

Vilmorin Variety

Nantes carrots. Strong tops with good disease resistances.

Maturity 110 days from sowing. High yield potential.

Slicing, cello and baby Nantes markets.

FOLIAGE

- Excellent speed of emergence, good behavior in stressful conditions,
- Healthy leaves good attachment, good aptitude to harvest by top lifting,

ROOT

- Cylindrical shape, well-rounded tips at maturity.
- Uniform size and shape,
- Average size: length: 8" (20 cm), diameter: 1.75" – 2" (4.5 – 5 cm),
- Good taste (sweet),
- Good holding in soil, keep its shape and quality after maturity

The root size (length and diameter) depends on the sowing population.

RESISTANCES

- HR: Alternaria, powdery mildew,
- IR: Cavity spot, Xanthomonas carotae, Cercospora carotae

Versatile variety, suits well for the organic production.

HR : High Resistance - IR : Intermediate Resistance. The genetic resistances are not dispensed from prophylactic measures to be used as an addition. Our recommendations, suggestions, growing cycles and maturity information are only indicative and based on our own observations and our general experience. They are not contractual and they do not necessarily imply a successful harvest and/or result. The success of the cultivation also depends on factors non-related with the seed.
