

TEXTO F1

Vilmorin Variety

**Nantes carrot, Strong disease resistances, High marketable yield,
Tolerance to mechanical shocks (breakage, cracking).
For the main season sowings, Maturity 130 days from sowing.**

FOLIAGE

- Healthy with a strong attachment,
- Erected habit, deep green color,
- Good tolerance to first frosts at fall,
- Good aptitude to late harvest by top lifting,

ROOT

- Cylindrical shouldered shape, well rounded tips at maturity,
- Average length: 7".5 - 8" (18-20 cm),
- Average diameter: 1"1/2 – 1"3/4 (4-4.5 cm),
- Good root quality:
 - o Smooth,
 - o Good color, external and internal,
 - o Deeply buried in the ground (no green shoulders and good tolerance to first frosts)
 - o Strong against silvering and veining,

RESISTANCES

- HR: Alternaria, powdery mildew, breakage
- IR: Cavity spot, silvering, frost

HR : High Resistance - IR : Intermediate Resistance. The genetic resistances are not dispensed from prophylactic measures to be used as an addition. Our recommendations, suggestions, growing cycles and maturity information are only indicative and based on our own observations and our general experience. They are not contractual and they do not necessarily imply a successful harvest and/or result. The success of the cultivation also depends on factors non-related with the seed.
