

VOLCANO F1

Vilmorin Variety

**Main season Nantes carrot, Very good root quality,
Strong disease resistances, High marketable yield, Good storage capacity**

FOLIAGE

- Healthy with a strong attachment,
- Good tolerance to first frosts at fall,
- Good aptitude to late harvest by top lifting,

ROOT

- Cylindrical shouldered shape, well rounded tip,
- Average size: length: 8 - 9 inches (20-23 cm), diameter: 1"1/2 – 1"3/4 (4-4.5 cm),
- Good root quality:
 - o Smooth with a good external and internal color,
 - o Roots well buried in soil (no green shoulders, good tolerance to first frosts at fall,
 - o Strong against silvering,

The root size (length and diameter) depends on the sowing population.

RESISTANCES

- HR: Alternaria, powdery mildew,
- IR: Cavity spot, silvering, frost

Suits well for the organic production

EARLINESS

- Medium late, maturity 130-140 days after sowing

HR : High Resistance - IR : Intermediate Resistance. The genetic resistances are not dispensed from prophylactic measures to be used as an addition. Our recommendations, suggestions, growing cycles and maturity information are only indicative and based on our own observations and our general experience. They are not contractual and they do not necessarily imply a successful harvest and/or result. The success of the cultivation also depends on factors non-related with the seed.
