

# MUSTANG F1 (AD.6033)

## White- Self Wrapping

- 90-95 days, uniform, with a well grouped harvest
- Heavy curd with a good holding ability
- Suitable for fresh and processing

### DESCRIPTION

#### TYPE

- Hybrid cauliflower for central coast, CA over winter for fresh and processing

#### PLANT

- Large frame
- Good plant vigor with a good self-covering

#### CURD

- White, and well wrapped
- High dome shape
- Dense and heavy with a steady weight
- Good holding ability

#### HARVEST

- Maturity: 90 days after transplant (according to the growing period and conditions)
- Harvest periods for central coast, CA: January- April
- Well grouped maturity, allowing to finish the harvest after 3 cuts.

HR: High Resistance - IR: Intermediate Resistance. The genetic resistances are not dispensed from prophylactic measures to be used as an addition. Our recommendations, suggestions, growing cycles and maturity information are only indicative and based on our own observations and our general experience. They are not contractual and they do not necessarily imply a successful harvest and/or result. The success of the cultivation also depends on factors non-related with the seed.
